Fink Enderby District Energy – Enderby, BC

**Background**
Fink Enderby District Energy is the first privately-funded biomass district energy system operating as a Private Utility under 1 MW in western Canada. The district system currently serves eight residential, commercial and industrial customers while maintaining capacity for future growth.

**The Viessmann Solution**
A Viessmann Pyrot KRT-540 wood-fired boiler (rated at 540 kW) was commissioned as the system’s primary source of space heating, domestic hot water and pool heating. The fully-automatic Pyrot utilizes the industry’s most advanced combustion technology, triple-pass heat exchanger and modulating output control to achieve an efficiency of up to 85% while keeping emissions to a minimum. Its state-of-the-art system monitoring and safety equipment ensure safe and reliable operation. In 2013, a Vitocrossal 200, CM2-311 gas-fired, condensing boiler (rated at 326 kW) was installed to provide backup and additional capacity during peak loads.

**Installation Details**
A custom-built timberframe boiler house includes a district fuel bunker with a capacity of 50 tonnes, which allows two 53-foot trailers to unload simultaneously. An automated walking floor delivers fuel from the storage bunker to the Pyrot’s feed auger. When fuel gasification and combustion are complete, an automated deashing system extracts ashes from the combustion chamber and transfers them to an ash bin. An ash removal auger extracts the ashes into a large external container once they have cooled.

The Pyrot boiler feeds an 8,400 L water buffer tank before distributing heated water to transfer stations and customers through a 550-metre main line consisting of three-inch insulated Urecon PEX pipe.

Fink Enderby District Energy’s carbon neutral, wood biomass fuel is supplied by local sawmills, wood product manufacturers and wood waste diverted from landfills and businesses within a two-hour radius. Area landfills have the potential to increase their contributions in the future by modifying their material recycling facilities to create wood biomass fuel.

**The Results**
At full capacity, the system is expected to consume approximately 400 tonnes of greenhouse gases.
Fink Enderby District Energy – Enderby, BC

Present Customers
1. Tony’s Tire (35 kW)
2. Edwin D. (15 kW)
3. Enderby Autobody (35 kW)
4. Enderby Lions Pool (80 kW)
5. Royal Inn (DHW) (15 kW)
6. Cedar Solution (60 kW)
7. Fink Machine (85 kW)
8. Boiler House (Pyrot 540)
9. ENFAB (90 kW)

New Customers for 2014-15
1. Splatsin First Nation – Conference Facility 30,000 sq/ft
2. Splatsin First Nation – Gas Station / Restaurant 6500 sq/ft

Future Customers
1. Parkview Place (120 kW)
2. Marvin’s Mechanical (20 kW)
3. CNC (45 kW)
4. Seniors Complex
